

BrightPlanet's Deep Web Harvester license lets you automate the process of finding and harvesting relevant Big Data from the Deep Web. Designed specifically for organizations and companies who want control of the process behind their firewall, it is a true force multiplier for Big Data analytics and research.

How does it work?

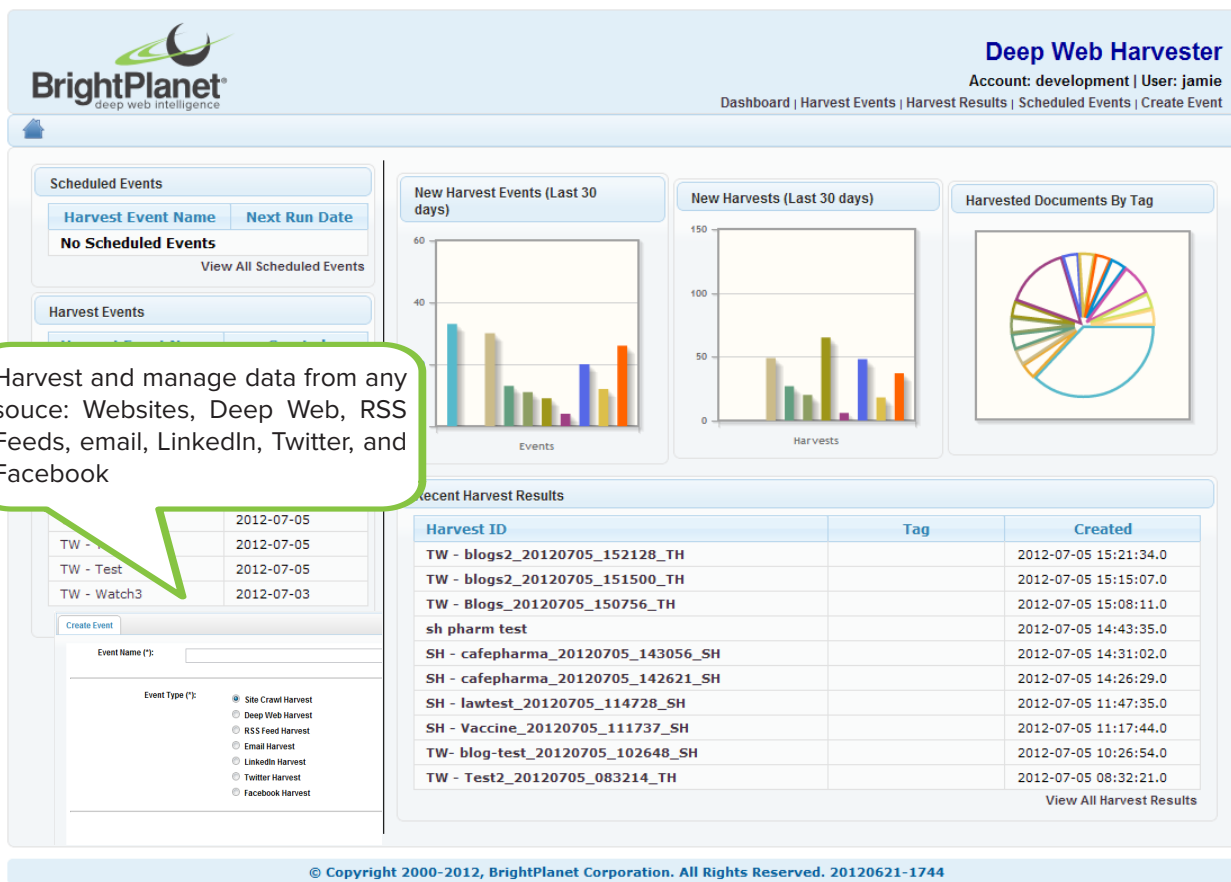

The Deep Web Harvester license lets you configure harvests to collect data from hundreds or even thousands of sources simultaneously. Then easily integrate harvested content into any analytical solution to start uncovering the intelligence your organization needs.

New Intel from Big Data

- Competitive Intel
- Fraud Detection
- Domain Management
- Anti-Counterfeiting
- Brand Protection
- Social Media Monitoring
- Intellectual Property Rights
- Trade Secret Theft Monitoring
- Pure Research
- Threat Traffic Monitoring

Features & Benefits

- ✓ Harvest and analyze content in any language
- ✓ Harvest and extract content from any source
- ✓ Automate queries to hundreds of sites at once
- ✓ Analyze data from virtually any analytic platform

The screenshot shows the 'Deep Web Harvester' dashboard. At the top left is the BrightPlanet logo. The top right shows the user account: 'development | User: jamie'. Below the header are navigation links: 'Dashboard | Harvest Events | Harvest Results | Scheduled Events | Create Event'. The main dashboard area contains several widgets:

- Scheduled Events:** A table with columns 'Harvest Event Name' and 'Next Run Date'. It shows 'No Scheduled Events' and a 'View All Scheduled Events' link.
- Harvest Events:** A section for managing active harvests.
- New Harvest Events (Last 30 days):** A bar chart showing the number of new harvest events over time.
- New Harvests (Last 30 days):** A bar chart showing the number of new harvested documents over time.
- Harvested Documents By Tag:** A pie chart showing the distribution of harvested documents across different tags.
- Recent Harvest Results:** A table listing recent harvests with columns for 'Harvest ID', 'Tag', and 'Created'.
- Create Event Form:** A form to create a new harvest event, including an 'Event Name (*)' field and a radio button selection for 'Event Type (*)' with options: Site Crawl Harvest, Deep Web Harvest, RSS Feed Harvest, Email Harvest, LinkedIn Harvest, Twitter Harvest, and Facebook Harvest.

 A green callout box points to the 'Recent Harvest Results' table with the text: 'Harvest and manage data from any source: Websites, Deep Web, RSS Feeds, email, LinkedIn, Twitter, and Facebook'.
